

CalendarSet

Version 4.0.2

Release notes

December 9, 2015

Published by e-Node worldwide

www.e-node.net/cs

System requirements

CalendarSet version 4 is compatible with 4D v11 to v15, for both MacOS and Windows.

It requires MacOS 10.6.8 or higher and Windows XP SP2 or better.

4D v15 R releases

CalendarSet version 4.x is not compatible with 4D's v15 R releases a.k.a. v16 beta in 64-bit developer mode. We are currently working on CalendarSet version 5, which will support this context and will be made available before 4D v16 goes public.

Check out the news on www.e-node.net and forums.e-node.net.

Version 4.0.2

- Fixed *CS_GetDrgSrcEvt* in compiled mode (incorrect handling of parameters)

Version 4.0.1

- Fixed a crash with *CS_SetDayStyleB* (incorrectly accessing the font name)

Version 4.0 hf1

- Fixed text printing with 64-bit 4D server on Mac
- Added support for "use double-click" on minutes (single-click is default) to ACCEPT

Version 4.0

CalendarSet v4 is a complete rewrite, Unicode, 64-bit server and 4D v15 compatible (up to v15 “release” versions).

Existing applications using CalendarSet previous versions need a little if any updating to work with version 4.

- **Support of the new e-Node Online automatic registration:** this optional registration removes the need to retrieve the serial information or machine ID from the end user setup
- **Online instant activation:** Master (unserialized) keys can now directly be entered in the demonstration mode dialog. One-click registration, no need to recompile, no need for serial numbers or machine IDs!

This version also brings new features that will make your calendars even more powerful:

- Completely rewritten and redesigned manual including 8 updated examples
- Enhanced demonstration database including the manual examples source code
- New e-Node automatic registration system: it is no longer needed to retrieve serial numbers!
- Offscreen mode: print or publish calendars on the Web without having to display them in 4D
- Constants for code legibility
- Automatic PDF or EMF conversion
- Times
- Native text drawing
- Current day specific background
- Out of range dates specific background
- OS settings honored for date formats and region parameters
- Picture library icons
- and much more: see Chapter 3 from the new manual.

In addition, drag and drop has been tremendously enhanced:

- event and banners dragging
- drag and drop within a CalendarSet area (with automatic update)
- drag and drop to and from other CalendarSet areas
- drag and drop to and from AreaList Pro areas
- drag and drop to and from any 4D droppable object
- drag and drop to and from any other application that accepts text
- drop from a document or folder in a MacOS Finder or Windows Explorer window
- control of the drop from external sources (accept/reject) through powerful callback mechanisms
- control of the drop from plugin areas (including AreaList Pro) through simple “access codes”

Upgrades

Upgrades from all previous versions (single user or server) are available at 50 € from www.e-node.net/cs

Competitive upgrades

Two competitive upgrade offers are available to hmCal, 4D Agenda and SchedulePack users.

Welcome offer: -50% discount on any single user or server license, as well as the first year for unlimited/OEM licenses, matching an existing license registered to your name / company / 4D serial for hmCal, 4D Agenda or SchedulePack. Enter code "WELCOME".

Welcome back offer: -70% discount on any single user or server license, as well as the first year for unlimited/OEM licenses, matching an existing license registered to your name / company / 4D serial for hmCal, 4D Agenda or SchedulePack and an old (any version) CalendarSet license. Enter code "WELCOME BACK".

Proof of purchase of existing licenses will be required.
